To whom it may concern,
I am writing to show my support for Satellite Radio. I find it to be an excellent service and it provides programming and information that is unavailable through broadcast radio. I feel that you should reject the NAB's petition 04-160. In my opinion, satellite radio, is a valuable alternative to broadcast radio, much like cable TV and satellite TV have become valuable alternatives to broadcast television. I understand that traditional radio stations feel threatened by these new services and are worried about losing business. They should be forced to survive through improving their product, not through legislating their competitors out of business.

Thank you for your consideration in this matter.
